

CONSULTING TRAINING SUPPORT

As the UK prepares for the ban on sales of new petrol and diesel cars and vans by 2030, businesses face many challenges as they begin to make the switch to full e-mobility. The confusion surrounding EVs, charging times, vehicle range, charger types, battery capacities, charging networks, home charging, workplace, destination, fleet and rapid charging variants make choosing the optimum solution for your business fraught with many challenges.

With the choice of electric vehicles increasing at an unprecedented rate, the chances of making ill-informed decisions is growing exponentially. Understanding how the switch to EVs will affect your business is one of the single most important aspects of making the switch. From choosing the correct vehicles, planning how they'll integrate with your day-to-day business operations while ensuring that you have sufficient energy to deploy and operate the charging portfolio required to keep your vehicles moving, all make for a daunting task.

EV Innovation Ltd offer both independent and unbiased support at all levels of business to allow informed decisions to be made based on how the switch to EVs will affect your operations. With a broad background, spanning some 20+ years, in renewable energy and electric vehicles, we are uniquely placed to guide your business through the range of options open to you, while creating a bespoke and sustainable roadmap of your transition to electrification.

Before we engage with any client, we conduct an initial exploratory discussion to ascertain the current position of the business in relation to making the switch. The earlier in that process we meet, the clearer the path we can create. Once we establish the level of help and support each client requires, we engage on a case-by-case basis, creating the support plan which best suits their requirements. We then begin the process of understanding how the transition to e-mobility will affect their business and begin to gather the data required to create the roadmap to follow.

Your roadmap will incorporate and reveal all aspects of how EVs will affect your business, including power consumption patterns, energy costs and grid limitations, among others, and will reveal when and how to mitigate against many of the pitfalls which lie ahead as you progress along your e-mobility journey over the next few years and beyond.

Whether you operate a small family-run business, or a large corporate enterprise, the challenges remain the same. Get things right first time and your transition will run smoothly, predictably and within your direct control. With no forward planning, you will be forced to make ill-informed decisions on an ad-hoc basis, based on unsound advice, often resulting in costly mistakes and associated consequences for your business.

We're here to help you to navigate through this transition to ensure that your journey is smooth, predictable, properly costed and managed.
