

AT HOME IN CONSTRUCTION TRAFFIC.

Reliability is key in the construction sector. The Arocs is built robustly and designed with function in mind down to the last detail. It also boasts high efficiency and safety.

Trucks you can trust

THE AROCS.

Performance

The Arocs makes an impression with its outstanding performance, irrespective of the terrain demands. A choice between resilient steel spring suspension and a combination of steel spring and air suspension results in a high degree of flexibility and optimum chassis set-up. With all-wheel drive chassis ranging from 4x4 to 8x8 and generous ground clearance, the Arocs can negotiate any terrain, no matter how demanding.

Robustness

The Arocs boasts impressive resilience, both on- and off-road. With its high ground clearance and large approach/departure angles, it is more than ready for difficult terrain. The special protective elements such as the three-part bumper with steel corners, the flexible pivoting entry step and the protective headlight grille offer the protection needed in the face of the everyday challenges of construction traffic.

Operating efficiency

Operating efficiency is key in the area of construction traffic, and the Arocs sets standards here. The innovative Hydraulic Auxiliary Drive (HAD) offers additional traction in demanding terrain situations and assists the vehicle at speeds of up to 30 km/h. This technology guarantees the seamless transfer of traction and reduces vehicle weight by up to 575 kg, thereby not only increasing the payload, but also lowering fuel consumption. The Arocs combines efficiency and maximum traction precisely when needed – making it ideal for use in the most difficult terrain.

Engine

The beating heart of the Arocs is its powerful and efficient third-generation OM 471 engine. This engine not only guarantees powerful starting and precise manoeuvring, but also makes an impression with its inner-engine optimisations that lower fuel consumption by up to 4% compared with the preceding generation. In combination with the PowerShift Advanced transmission management system, the Arocs offers unparalleled dynamism. Be it when starting off in difficult terrain or in urban traffic, the Arocs remains cost-efficient and powerful at all times.

THE AROCS.

Comfort

The workplace in the Arocs has been carefully conceived too and offers maximum comfort. The various cab versions – the compact S-cab, the more spacious M-cab with additional storage space and the L-cab for longer journeys – adapt perfectly to your specific needs. Each cab offers excellent all-round visibility and ergonomic control elements, which are essential for long workdays. The standard air-sprung driver's suspension seat offers maximum seat comfort and can be put in numerous positions. You can optionally choose a comfort suspension seat or climatized suspension seat with integrated seat heating, for guaranteed pleasant working conditions even under the toughest conditions.

Service included

We help you keep your Arocs where it earns money – on the road – with tailored service contracts, a network of authorised repairers and Mercedes-Benz Trucks Service 24h, which is available around the clock. Our Mercedes-Benz Trucks Complete service package includes maintenance, checks, repairs, the replacement of wear parts and much more besides – throughout the truck's life cycle. In the area of vehicle management, you are assisted by digital services such as Mercedes-Benz Trucks Uptime, Fleetboard, TruckLive and the My TruckPoint for Mercedes-Benz Trucks customer portal. Daimler Truck Financial Services offers bespoke financial services for both vehicle usage and vehicle ownership.

Attentive on-board aids

Be it on the road or in construction site traffic, the innovative assistance systems¹ from Mercedes-Benz Trucks will keep you safe while behind the wheel of your Arocs. The holistic safety concept not only conforms to all statutory regulations and standards but also goes beyond these with several of its functions. The latest version of Active Brake Assist can recognise hazards and critical situations better than ever before and react with clear warning signals or even initiate an automatic emergency stop. Active Sideguard Assist 2 is also there for drivers when it comes to turning off to the left. In critical situations, it can intervene by braking the vehicle. Further safety assistance systems for traffic signs and distance control and the reversing camera make driving even safer, allowing you to better keep track of everything on the road and let you travel in even greater comfort.

¹ Assistance systems can only support drivers. The driver is always fully responsible for driving the vehicle safely.
